

2017-2018 Assessment Cycle COLA_Sociology BA

Mission (due 12/4/17)

University Mission

The University of Louisiana at Lafayette offers an exceptional education informed by diverse worldviews grounded in tradition, heritage, and culture. We develop leaders and innovators who advance knowledge, cultivate aesthetic sensibility, and improve the human condition.

University Values

We strive to create a community of leaders and innovators in an environment that fosters a desire to advance and disseminate knowledge. We support the mission of the university by actualizing our core values of equity, integrity, intellectual curiosity, creativity, tradition, transparency, respect, collaboration, pluralism, and sustainability.

University Vision

We strive to be included in the top 25% of our peer institutions by 2020, improving our national and international status and recognition.

College / VP and Program / Department Mission

Mission of College or VP-area

Provide the mission for the College or VP-area in the space provided. If none is available, write "None Available in 2017-2018."

The College of Liberal Arts is dedicated to the advancement of knowledge through teaching, research, and service. The College teaches students to think critically, applying scientific principles and intellectual schema to understand human behavior and society in a diverse world, to express ideas and ideals in a variety of forms, and to understand themselves and others as members of regional and global communities. The intellectual and creative foundations of this enterprise are written and oral communication, analytical and reasoning skills, and the ability to solve problems creatively. Each departmental curriculum presents perspectives from the past, provides an understanding of the present and directs attention to the challenges of the future. As active researchers, faculty in the College work to advance the frontiers of knowledge and our understanding of humanity and the world we live in, and to use that knowledge and understanding to improve the human condition.

Mission of Program / Department

Provide the program / department mission in the space provided. The mission statement should concisely define the purpose, functions, and key constituents. If none is available, write "None Available in 2017-2018."

Sociology focuses on human behavior in the context of culture and society. Its task is to understand human beings – what they do and why they do it. Sociologists try to bring into focus the familiar and the mysterious behavior of people and make the behavior understandable. Though no one has yet arrived at a total understanding of human behavior, sociology offers the adventure of acquiring understanding beyond the point we reach in our usual day to day existence. Students learn about people as social beings and gain an understanding of the relationship between society and the individual. Given that such an understanding is essential to successful social interactions, whether in business, leisure, or personal relations, sociology is an important facet of a college education. The curriculum is designed to provide students with an integrated body of knowledge leading to careers in, for example, community service, social work, counseling, marketing research, criminal justice and personnel management. The curriculum offers a strong background for persons who wish to enter such professional schools as law, social work, theology and business, as well as graduate training in sociology and other closely related fields.

Program / Department Assessment Narrative

The primary purpose of assessment is to use data to inform decisions and improve programs (student learning) and departments (operations); this is an on-going process of defining goals and expectations, collecting results, analyzing data, comparing current and past results and initiatives, and making decisions based on these reflections. In the space below, describe the program's or department's overall plan for improving student learning and/or operations (the "assessment plan"). Consider the following:

- 1) What strategies exist to assess the outcomes?
- 2) What does the program/department expect to achieve with the goals and objectives identified above?
- 3) How might prior or current initiatives (improvements) influence the anticipated outcomes this year?
- 4) What is the plan for using data to improve student learning and/or operations?
- 5) How will data be shared within the Program/Department (and, where appropriate, the College/VP-area)?

Assessment Process

Results & Improvements (due 9/15/18)

Reflection (Due 9/15/18)

Reflection

The primary purpose of assessment is to use data to inform decisions and improve programs and operations; this is an on-going process of defining goals and expectations, collecting results, analyzing data, comparing current and past results and initiatives, and making decisions based on these reflections. Recalling this purpose, respond to the questions below.

1) How were assessment results shared in the program / department?

Please select all that apply. If "other", please use the text box to elaborate.

- Distributed via email (selected)
- Presented formally at staff / department / committee meetings
- Discussed informally (selected)
- Other (explain in text box below)

2) How frequently were assessment results shared?

- Frequently (>4 times per cycle)
- Periodically (2-4 times per cycle) (selected)
- Once per cycle
- Results were not shared this cycle

3) With whom were assessment results shared?

- Please select all that apply.*
- Department Head (selected)
- Dean / Asst. or Assoc. Dean (selected)

Departmental assessment committee (selected)
Other faculty / staff (selected)

4) Consider the impact of prior applied changes. Specifically, compare current results to previous results to evaluate the impact of a previously reported change. Demonstrate how the use of results improved student learning and/or operations.

Our previous assessment reported the decision to link the synthesis and methods courses and to require a capstone project that bridged across the two. In part, this worked well as demonstrated in the current 17/18 AY assessment specifically with FA17/SP 18 301/308/309 data. However, while in mid-cycle for this assessment, we came to realize that pedagogical differences between instructors created unexpected difficulties for students and for assessing outcomes. In particular, one instructor objected to definitions of plagiarism used by other program members and likewise objected to adopting a team plan for teaching critical courses. As a result, the current assessment is unable to evaluate both quantitative and qualitative research classes. We have adjusted teaching assignments to include a new team teacher for the 18/19 AY and also to assigning a two-semester sequence in the teaching load so that the same instructor teaches part 1 and part 2 of the capstone project. The next assessment cycle should allow for evaluation of 301 with both 306/07 and 308/09. Still, with the current assessment results, we were able to document improved student learning outcomes via the final combined qualitative capstone projects reported in this cycle.

Our previous assessment reported insufficient data on the training and implementation of faculty in the use of new classroom technologies. However, the current assessment cycle has sufficient data to report that 70% of sociology faculty have been fully trained in the use of new classroom technologies. The remaining 30% of faculty have not been trained, but 10% report a willingness to do so. The remaining 20% are resistant to change and we are exploring ways to motivate and encourage professional development in faculty that are demoralized and disengaged. We intend to continue to rely on the ongoing training provided by the Distance Learning program to maintain excellence in teaching. Likewise, we intend to continue the enthusiastic senior mentoring program for best practices in the classroom and research productivity. The team introduced a uniform plan for teaching the synthesis course (301) during the last assessment cycle with great success as reported in this cycle, and will undertake developing a uniform plan for teaching each of the two methods courses (306/7 and 308/9) for the next assessment cycle.

The unit continues to be short one full-time instructor. During the 17/18 AY, a senior faculty member (and Department Head) covered the extra workload in part to model best pedagogical practices to junior faculty and to prevent a shortage of seats in the introductory course offerings. Both were excellent short term solutions to the shortage of teaching faculty as well as modeling best practices for junior faculty and are supported by findings presented here and as part of the Sociology Gen Ed assessment submitted elsewhere. Unfortunately, this is not a viable long term solution and the team is struggling to cover those courses through overloads for all junior and some senior faculty. A new adjunct faculty member was also identified and is subsequently undergoing training in hopes to offset impending losses of faculty specialties in the upcoming assessment cycle. Discussions with administration have included requests for a new faculty line as well as permission to replace hires that have or will leave the program.

5) Over the past three assessment cycles, what has been the overall impact of "closing the loop"? Provide examples of improvements in student learning, program quality, or department operations that are directly linked to assessment data and follow-up analysis.

Over the past three assessment cycles, the overall impact of closing the loop has resulted in a) a refined understanding of what was needed for assessment, b) a refined understanding of what was needed for our relatively new synthesis course (301), c) a refined understanding of what was needed to create a capstone project that bridged a two semester process, d) a refined understanding of the need for faculty willing to work and teach as a team especially for critical courses and e) the value of teamwork in improving the learning outcomes of our students. One example of improvements in student learning is found in the report for 301 after we implemented a uniform plan of teaching the course that we developed as a team. This example is further illustrated in the current assessment that reports that students are better prepared for the next level of required methodological coursework (308/09 in this assessment). Students are also now exploring the potential to publish their newly completed capstone projects. Three years ago, capstone projects were not required; there was no uniform plan for teaching the synthesis or methods courses, and students often focused their attention on multiple partial research projects with little understanding of how the parts might piece together into a publishable whole. Students today are in much better control of their understanding of the connection between theory and research, of the different

methods of research, and on how the individual parts are synthesized into a publishable and informative product that may be used for important policy decisions in the public or private sector.
