UNIVERSITY OF LOUISIANA AT LAFAYETTE **PLANNING** **THE FUTURE OF OUR ATHLETIC PROGRAMS**

UNIVERSITY OF LOUISIANA ATHLETICS IDENTIFIED THE NEED TO DEVELOP A COHESIVE DIRECTION FOR THE FUTURE DEVELOPMENT OF ATHLETIC FACILITIES.

Riding the wave of recent success sparked by back to back bowl victories by the football program, the University felt it was time to have a comprehensive plan for growth and development of their athletic department in place. Several facility needs had already been identified and studied. Prior to any of those being implemented, Athletics wanted to ensure they build quality, state of the art facilities utilizing a plan that doesn't waste money.

The majority of athletic facilities lie nearly a mile west of campus. Given the large expanse of parking associated with Cajun Field, this location also serves as the primary parking area for students who commute to campus. The University just recently commissioned a campus master plan and the goal of this athletics master plan is to blend into the thoughts and strategic initiatives set forth in that plan. Part of that plan includes transit options designed to link the athletic village and commuter parking area more conveniently with campus. This initiative will play a major role in the overall success of the athletics master plan largely because the off-campus location creates the need for student-athletes to travel back and forth, sometimes multiple times each day.

Throughout the course of this investigation it became clear to the design team that the Ragin' Cajuns culture is a vibrant component of the athletics experience for fans, coaches and student-athletes and something that needs to be embraced as part of the plan. The Ragin' Cajuns community is one built on good times, hospitality and incredible food. There are currently several areas throughout the athletic village that cater to this culture and others have been identified to reinforce and sustain it.

The lofty desired outcome of this investigation was clearly laid out at the beginning of the investigation. Athletic Director Scott Farmer made it clear when he said, "I want this to be

the most important thing the Athletics Department has done in 50 years". This plan is intended to serve as a road map, guiding the growth and success of Ragin' Cajuns Athletics well into the future.

The recommendations within this master plan are expected to be implemented over time. A list of priorities have been proposed based on multiple factors including gender equity, potential available funding and specific program needs.

The top tier of facility priorities include improvements to the soccer and track facility, seating and amenity expansion at the south end of Cajun Field and the new Athletic Practice Facility.

The next level of facility priorities include the remaining proposed improvements at Cajun Field identified within phase one and the renovation and expansion of M.L. "Tigue" Moore Field.

The final tier of facility improvements include the new Sports Plaza, renovation of the Academic Center, proposed improvements at Earl K. Long Gymnasium and the Culotta Tennis Center and a new Basketball Practice Facility.

PROCESS

The development of this facilities master plan has been a collaborative effort including the athletic department, physical plant department, university administration and the Ragin' Cajuns Athletic Foundation, all of whom have provided leadership and direction for the design team.

The following outline illustrates the process taken to create this document.

DATA GATHERING

This portion of the process is essentially broken into two parts, touring and photographing existing facilities and acquiring any available existing facility documentation. This collection of information becomes the foundation in the evaluation of existing facilities and their short and long term viability as a functional University asset which would promote the growth of the Athletic Department.

PROGRAMMING & GOAL SETTING

Having a clear vision for the direction of the master plan is essential and one of the first objectives of the master planning process is to establish the goals for the effort. To that end, a vision and goal setting session that included leadership representatives from campus and athletics was held.

The following represents the guiding principles established by the group:

- CUTTING-EDGE FACILITIES
- FACILITIES AND GROUNDS MAINTENANCE PLAN
- RECRUITING OPPORTUNITIES
- IMPROVE CONNECTION TO CAMPUS
- PLAN FOR FUTURE EXPANSION
- ATHLETIC COMMUNITY/VILLAGE

The design team also conducted a total of twenty separate programming meetings including the coaches of each sport, each department within athletics, the strength and athletic training leaders and a discussion establishing future sports to be offered by the university.

Those sports identified as future potential offerings include:

- WOMENS SAND VOLLEYBALL
- BOWLING
- WOMEN'S GOLF

In order to achieve an outcome that meets the desire to be fully integrated with campus and the campus master plan, a presentation of the campus master plan was given to the design team. The review established potential campus athletic sites, the desired usage of current campus athletic sites and the projected growth of the university and the associated building needs that accompany that growth.

SITE SELECTION

A variety of potential on and off campus sites were evaluated to test the placement of future facility needs. Several alternatives for the future development of the athletic venues were created and each tested against the desired goals of the master plan. The final solution concentrates future athletic development along Reinhardt Drive with a new athletics quad on axis with Cajun Field.

Several facilities have been programmed and conceptual plans created while future sites have yet to be determined. As future real estate becomes available it will be evaluated as potential sites for these facilities.

CONCEPT DESIGN

Conceptual plans for each proposed new or renovated existing facility have been created. The conceptual plans represent the requested programs developed with the input of coaches and administrators. Phasing for future facilities has also been identified based on priorities established during the process.

COST ESTIMATING

Cost estimates for each facility have been identified. The estimates are based on both the requested facility program and the associated conceptual drawings.

EXISTING FACILITIES

CAJUN COURTS & CULOTTA CENTER

Current - Men's and Women's Tennis

Future - Men's and Women's Tennis Competition & Practice (renovation of Culotta Center and addition of indoor tennis facility)

M.L. "TIGUE" MOORE FIELD

Current - Men's Baseball

Future - Men's Baseball (renovation and addition)

LAMSON SOFTBALL PARK

Current - Women's Softball

SITE PLANNING

A variety of potential sites were evaluated to test the placement of future facility needs. Several alternatives for the future development of UL athletic venues were created and each was tested against the desired goals of the master plan. Earlier versions included [1] relocating tennis to create space for a new football facility; [2] relocating the outdoor football practice fields on axis with a new football facility [3] relocating all athletic facilities along Bertrand drive as funds became available.

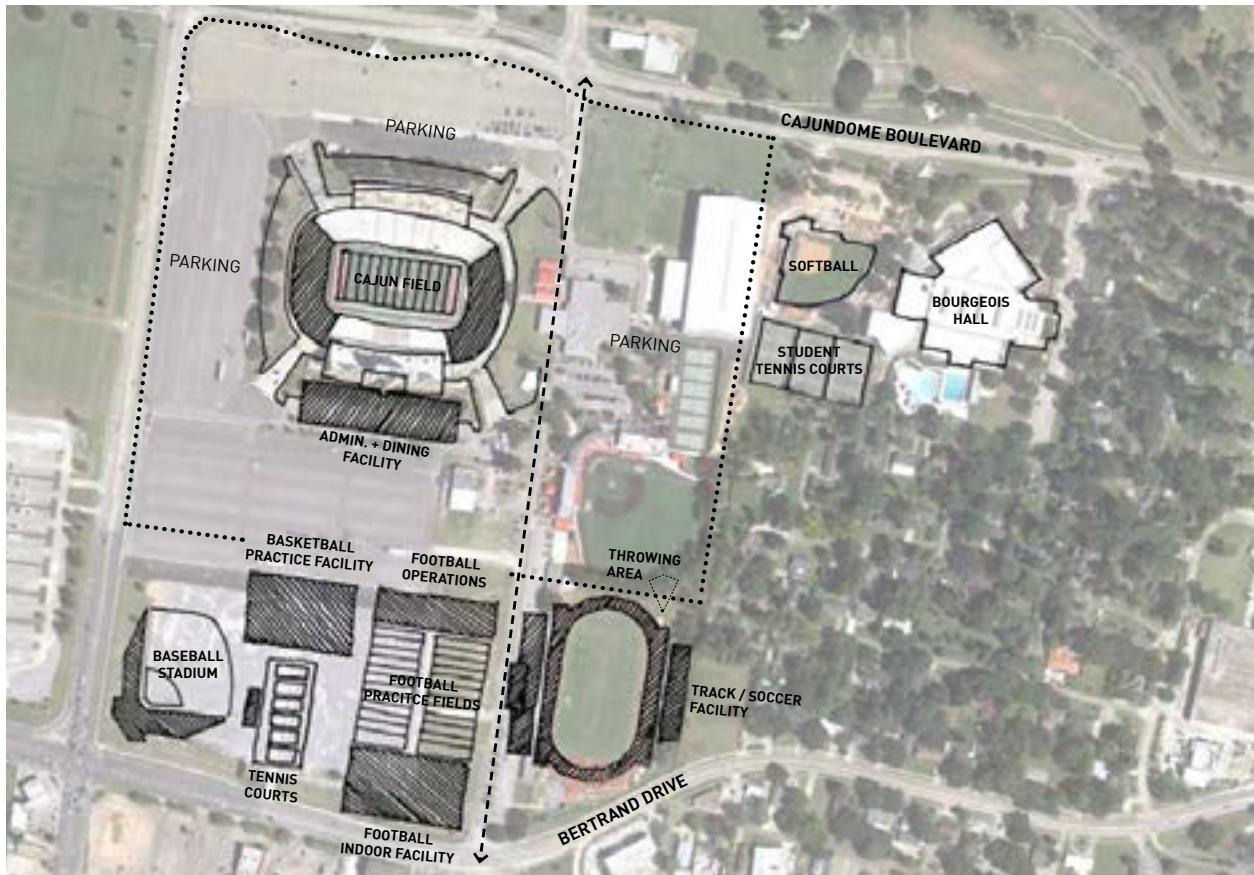

As each alternative was developed several considerations focusing primarily on the student-athlete were used to evaluate the overall success of the solution. The demanding schedule placed on the student athletes requires efficiency in their day to day activities. In order to achieve the desired efficiencies, logical adjacencies for programmatic elements was paramount. In addition to detailed room to room adjacencies, the ability to get from the classroom to the training room is an important factor. This consideration led to a centralized development of athletic facilities along Reinhardt Drive. The future student-athlete and recruiting is also a factor that cannot be overlooked. Each option needed to make a positive memorable impact on recruits and their coaches and family members.

The final solution concentrates athletic development along Reinhardt Drive while creating a new athletics plaza that will serve as the heart of the Ragin' Cajuns Athletics. A new athletics practice facility will connect to the existing indoor facility housing central equipment distribution and athletic training, strength and conditioning, coaching staff facilities, and player meeting rooms.

Several facilities have been programmed and conceptual plans created while future sites have yet to be determined. As future real estate becomes available it will be evaluated as potential sites for these facilities.

ACADEMIC CENTER

The University of Louisiana's Academic Center is a cornerstone of the Athletic Department. The academic center currently occupies over 10,000 square feet of the Conference Centers Mezzanine. The athletic master plan reinforces that this facility, with its highly desired campus location remain the focal point of UL Athletics. The reconfiguration of the existing space will accommodate the academic needs for a successful academic program. The newly renovated space will provide students and mentors a variety of spaces including: a study hall lounge, two computer labs, twelve small scale tutor rooms, two medium scale tutor rooms, and a classroom that will meet the everyday academic needs of student athletes.

While the on-campus location is recommended as the primary venue for athletic academics, a secondary location within a renovated and expanded Cajun Field could be proposed.

ATHLETICS PRACTICE FACILITY

The final solution concentrates on developing an efficient solution that considers phasing and implementation of facilities as funds are made available. The new athletics practice facility will serve as an extension of the existing Leon Moncla Indoor Practice Facility. This new facility will serve as the heart of the athletic department as it will be home to central athletic training, central equipment, strength training, coaches offices, footballs home locker room, and player meeting rooms. This developed plan is divided into two phases. Phase one includes the addition of the home football locker room, strength training, central equipment, central athletic training, and coaches office. It is recommended in phase one that the existing indoor turf also be replaced. Phase two reprograms the existing basketball court as a future strength training area.

M.L. “TIGUE” MOORE FIELD

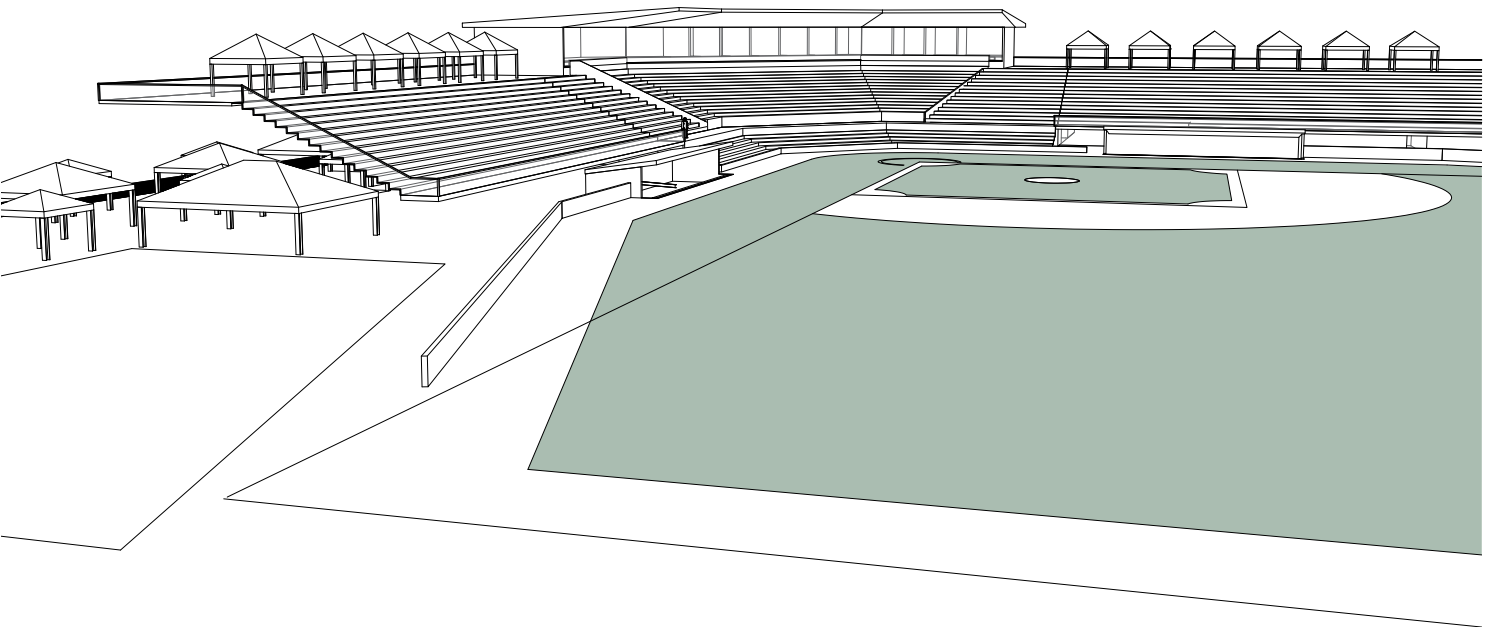

M.L. “Tigue” Moore Field sits between the Cox Communications building and the track and soccer complex and serves as the day to day home of the Ragin’ Cajuns Baseball team. The master plan proposes to extend Lourdes Park to the west along Reinhardt Drive. The proposed plan seeks to preserve the Cajun culture, while providing state of the art facilities and spectator amenities. It was determined that the existing stadium and press box facility does not adequately accommodate the program’s needs. It is recommended that the existing concrete stadium seating and press box facility be removed to make room for a new state of the art facility. The new facility will bridge existing bleacher seating along each side line by infilling with a new three story building that will house adequately sized spectator accommodations, additional club seating, state of the art press facilities, and box suites. It is recommended that the existing locker room facility and coaches offices be replaced with a new 4,500 square foot facility that will house equipment storage, athletic training, locker room facilities, and a team meeting room.

BASKETBALL PRACTICE FACILITY

Through the course of the master plan investigation it was determined that the Men's and Women's Basketball teams lacked the appropriate facility accommodations. It is recommended that a new basketball practice facility be constructed at the intersection of Cajun Dome Boulevard and Reinhardt Drive. This new facility will provide state of the art accommodations including: men's and women's locker facilities, player meeting rooms, coaches' offices, and a player's lounge. It is recommended that a new one and a half basketball court will accommodate facility needs and provide adequate flexibility for basketball camps.

GOLF FACILITY

Through the Master Planning process it was determined that the men's golf program would benefit from an indoor golf facility. Due to student athletes commute to and from practice and tournaments, it is recommended that the facility be located at the golf course. The specific location has yet to be determined. In addition, women's golf was identified as a viable addition to UL Athletics. The developed program accommodates both men's and women's golf programs.

STADIUM EXPANSION

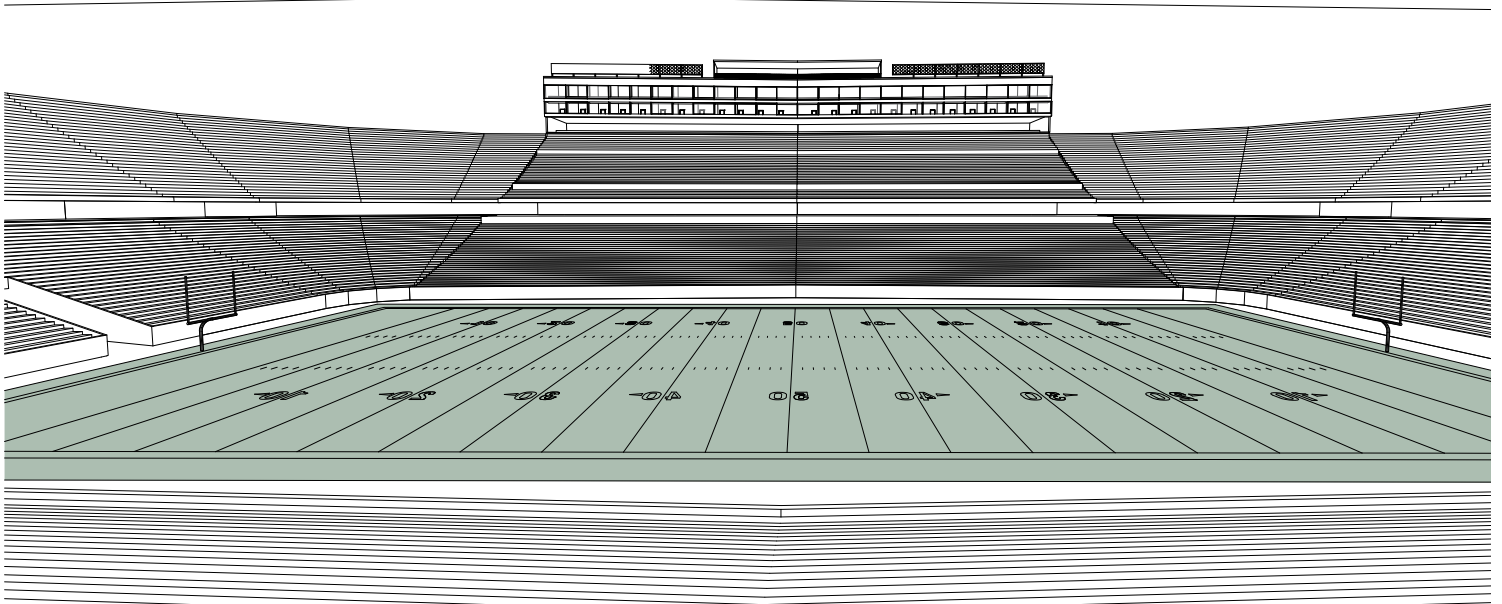

Cajun Field serves as the home of University of Louisiana's Ragin' Cajuns Football program. Through the master planning process Cajun Field was identified as a key element in the future development of UL Athletics. Through the interview process the coaching and administrative staff expressed the need for a state of the art football facility, premium seating opportunities, and a quality fan experience.

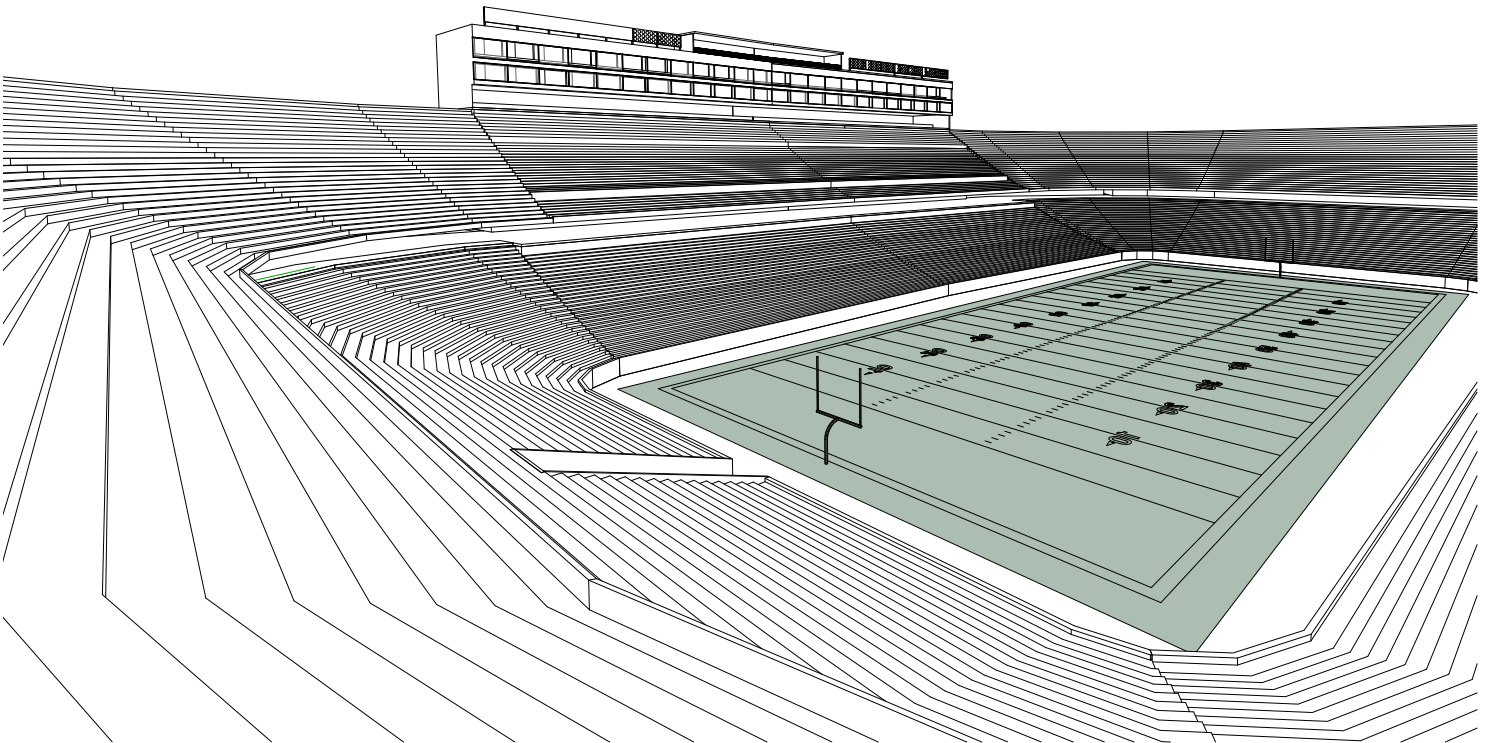

Two options were developed for the stadium expansion to Cajun Field. The first option investigated preserving a portion of the existing upper deck seating while introducing a new eight story press box facility that will house a new student dining hall, administration offices, premium seating, and box suites. This option preserves the first nine-teen rows of the upper deck, while introducing and additional 1,200 club seats, 96 loge seats, and 38 box suites.

The second option explores replacing the existing upper deck with a new press box facility and premium seating. This option provides spectators with improved sight lines, and premium seating opportunities, including club seats, loge suites, or box suites. The eight story press box facility will house all necessary operational programmatic elements including a kitchen, ticket office, media support, loading dock, merchandizing, in addition to a new student dining facility and administration offices.

CULOTTA TENNIS CENTER

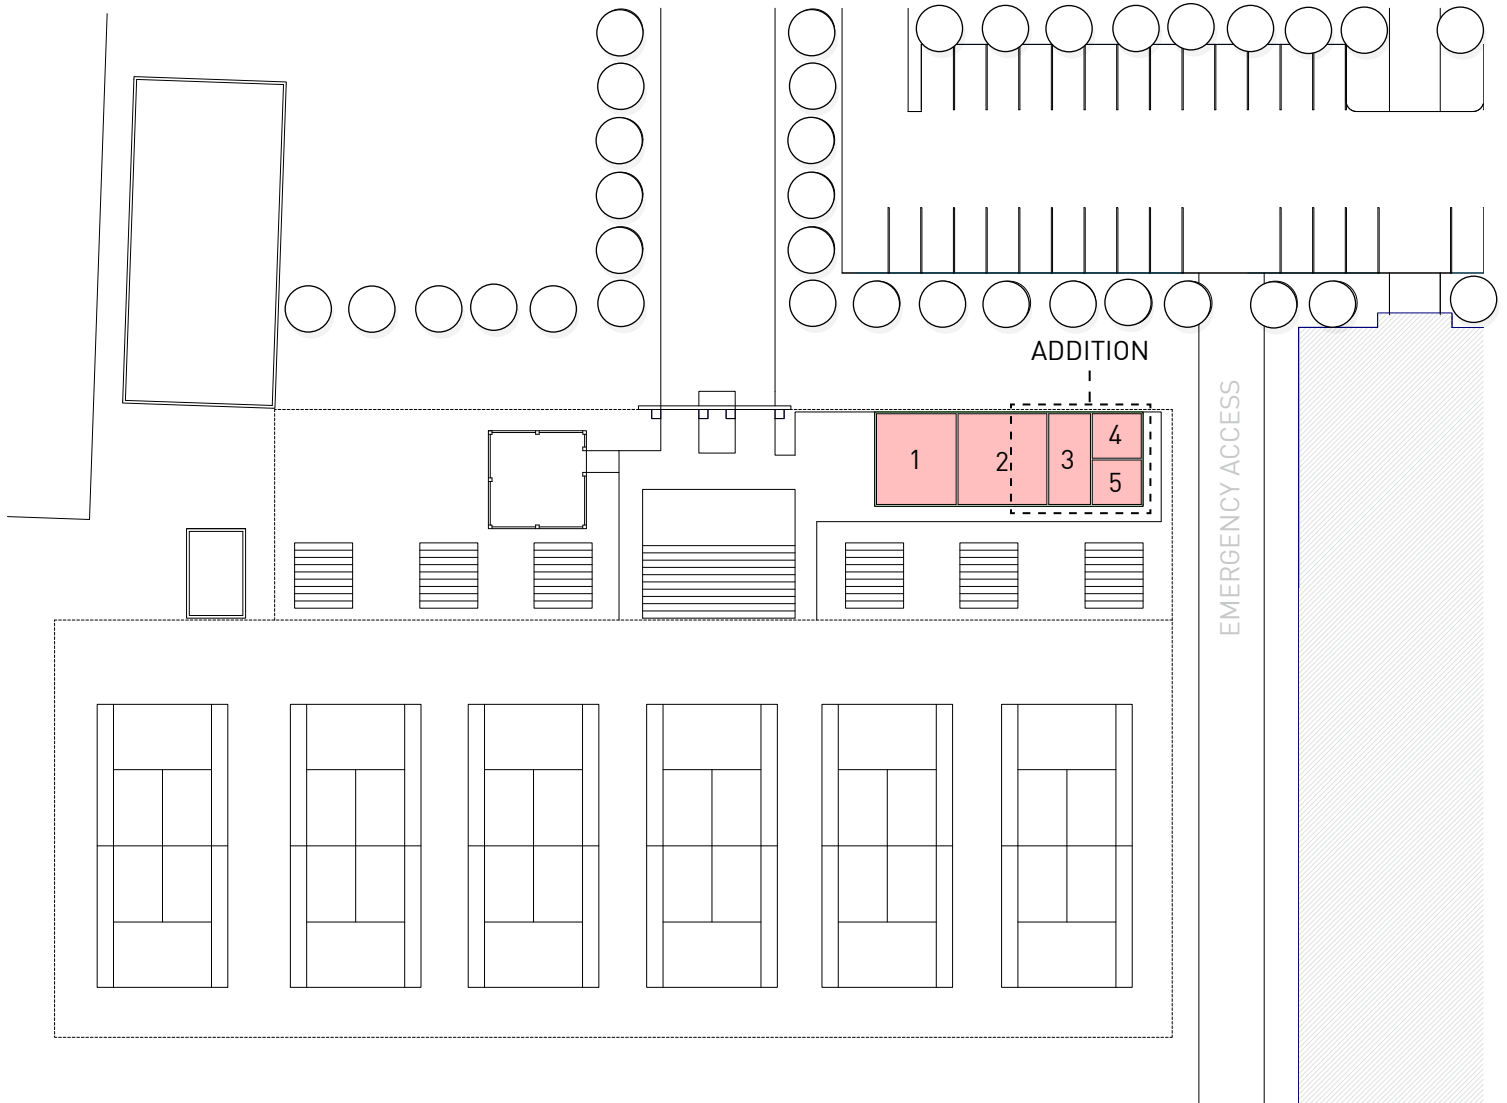

The Cajun Courts are home to Louisiana's Ragin' Cajuns men's and women's tennis programs. The existing tennis complex was constructed in 1975. Since then the 1,200 seat facility has hosted thirty-eight seasons. The newest addition to the Cajun Courts is the two-story Culotta Tennis Center, which was constructed prior to the start of the 2001 season. Through the interview process, it was recommended that a new men's and women's indoor tennis facility be included in the Athletics Master Plan. Throughout the Master Planning process potential sites were identified and developed within the context of the overall master plan. It was determined that a portion of the existing student tennis courts located next to Bourgeois Hall and Lamson Softball Park would serve as the new indoor tennis facility. It is recommended that a portion of the existing tennis courts be enclosed to create the indoor tennis facility.

TRACK + SOCCER FACILITY

Through the master planning process it is recommended that a new facility be constructed at the existing entry as identified in the proposed master plan. This new track and cross country facility is intended to meet the training needs of the UL men's and women's track program. This facility will house the track/cc and soccer locker rooms, coaches' offices, equipment storage, athletic training space, and state of the art press facilities. The existing grandstand is to be modified to meet current ADA requirements. The infield of the track will serve as the practice and competition for the UL women's soccer team. Due to these uses, the infield will not be suitable location for the throwing events such as the javelin, hammer and discus. The master plan proposes that the designated area north of Reinhardt Drive serve as the home for the throwing events. Due to the throwing area location it is recommended that appropriate safety equipment be installed, as well as spectator seating. Adjacent to the throwing area, a future soccer pitch is proposed as a primary practice area for the soccer programs. The existing (soccer/track) locker room facility east of the grandstand will be reconfigured to house meet officials and opposing teams.

EARL K. LONG GYMNASIUM

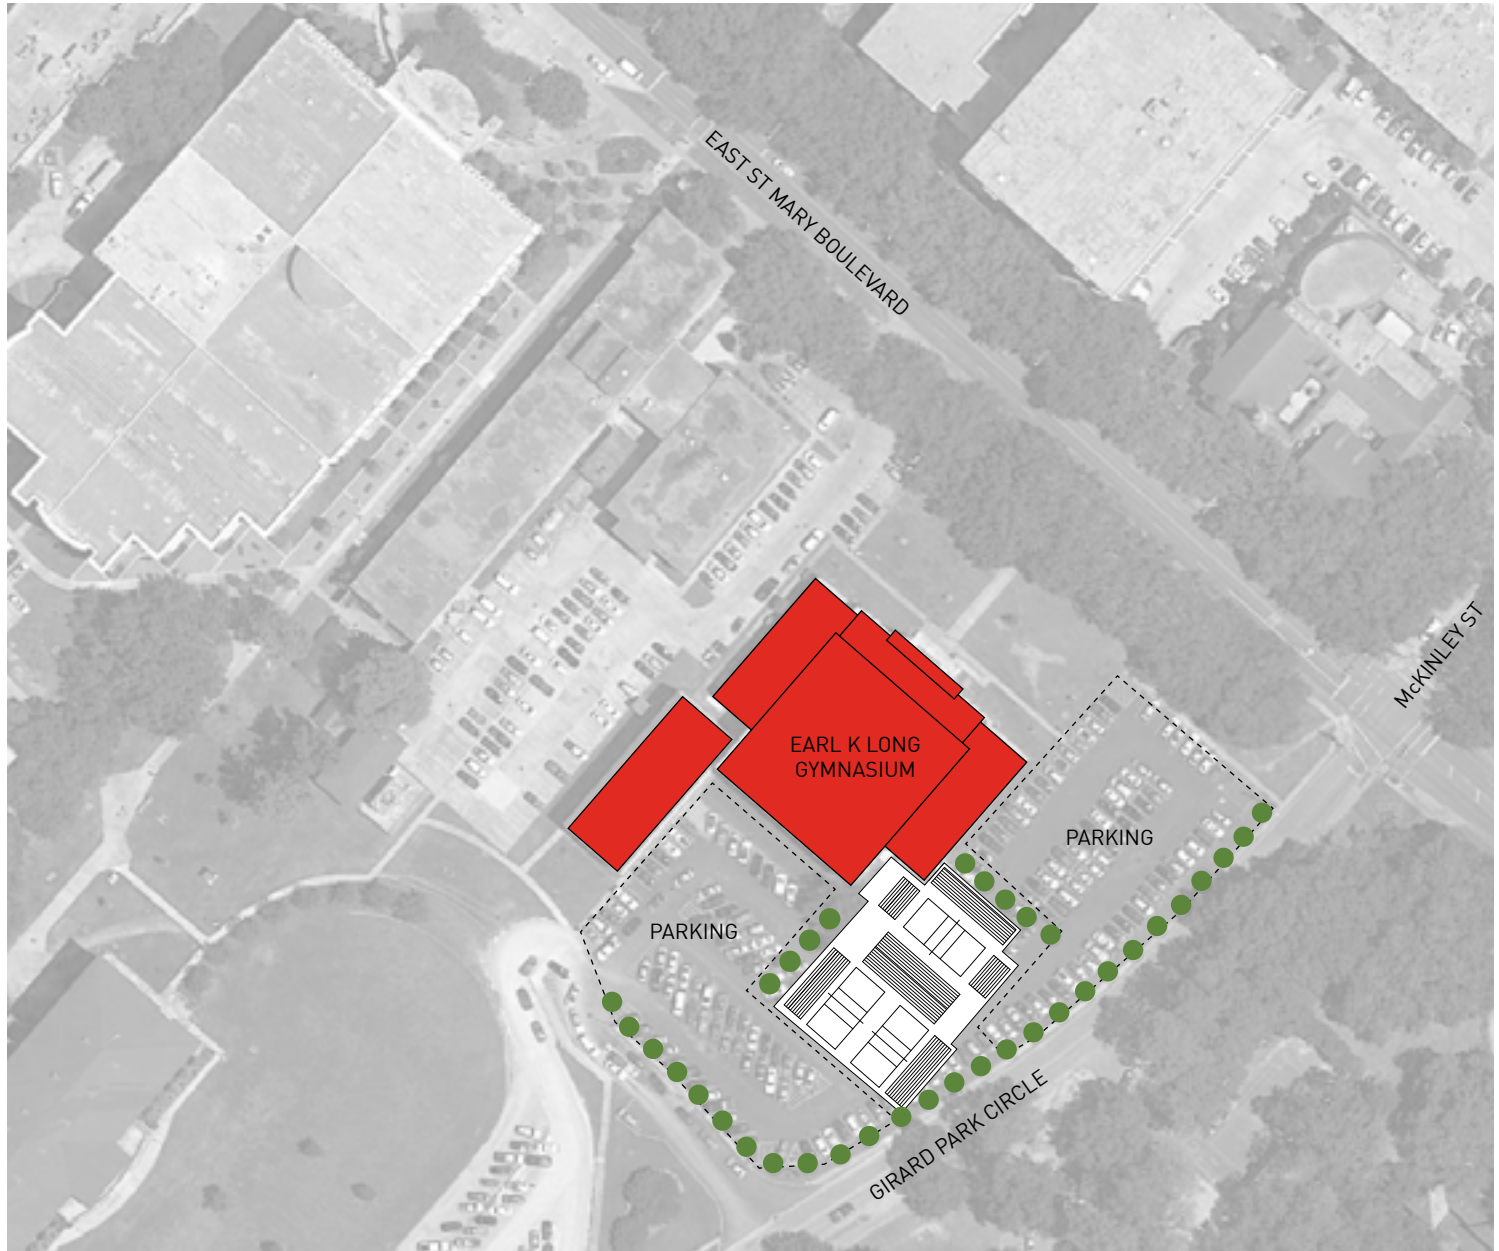

Earl K. Long Gymnasium is located in the heart of campus in between Billeaud Hall and the Alumni Center. The facility was constructed in 1939, serving as the home to the Ragin' Cajuns men's basketball program until 1950, when the program was relocated to Blackham Coliseum. Currently, Earl K. Long Gymnasium is home to the Ragin' Cajuns women's basketball and volleyball teams. The existing facility captures a total of 1,500 spectators along the west edge of the court. Through the Master Planning process it was determined that a new men's and women's basketball facility be constructed; once implemented Earl K. Long Gymnasium will be reconfigured to accommodate the women's volleyball program. Through the Master Planning process two separate programs and plans were developed for this facility.

The first option reconfigures the currently under-utilized space to accommodate the women's volleyball and basketball programs. This option provides each team with state of the art locker facilities, athletic training, equipment room, media support, court storage, coaches' offices, and a player's lounge. This option also includes the redevelopment of the fan experience with increased concessions, restrooms, and ticketing. The redistribution of space provided the opportunity to add visiting and auxiliary locker rooms, as well as an official's locker room.

The second option is developed around the implementation of the new men's and women's basketball practice facility. This option redefines Earl K. Long Gymnasium as the home to the Ragin' Cajuns women's volleyball and sand volleyball programs. The women's volleyball and sand volleyball team will benefit from state of the art accommodations including: new locker rooms, players' lounge, media support and film room, equipment storage, an athletic training area, and additional court storage. Option two seeks to redevelop the fan experience through increasing concessions opportunities, restrooms, and ticketing sales. In addition, space has been allocated for new visiting team and auxiliary locker rooms, as well as an official's locker room.

Through the interview process, it was determined that the implementation of women's sand volleyball is a viable option for athletics. Each option includes the latest facility requirements and spectator accommodations for the successful implementation of women's sand volleyball at the University of Louisiana.
